

When it comes to building green, it's not always black and white; or, more specifically, it's not always LEED® or nothing. The STO Building Group has over a decade of experience delivering integrated, high-performance, cost-effective solutions to meet our clients' sustainability goals.

The CM/GC plays an integral part, from concept to close-out, with our intimate knowledge of construction waste and demolition management, understanding of the cost-analysis of alternative green building solutions and expertise in the constructability of green technologies. We work to help our clients meet their sustainability goals while also providing viable alternatives for even greater efficiencies and implementing sustainable construction practices into the project management plan and through the supply chain. Whether your objectives are centered on reducing your carbon footprint or on employee health and well-being, the STO Building Group can help achieve your goals.

## CERTIFICATION PROGRAM EXPERTISE

The STO Building Group understands the impact that our industry has on the environment and the communities that we do work. Whether your objectives are centered on reducing your carbon footprint or on employee health and well-being, the STO Building Group can help achieve your goals.

Our teams have tools in place, to do more than track the embodied carbon in the materials we're using—we're committed to tracking our own impacts through the construction process itself. As signatories to the Contractor's Commitment, we're tracking impacts from our fuel usage, transportation, water, waste and creating jobsite environments that are not only safe but have wellbeing top of mind.

We offer the following sustainability consulting services:

- ◆ Gap analysis/eco-charette for major third-party certifications
- ◆ LEED® Administration
- ◆ WELL™ & WELL™ Health-Safety Rating
- ◆ Fitwel
- ◆ Just Coaching
- ◆ Living Building Challenge
- ◆ Healthy Materials
- ◆ Carbon Accounting
- ◆ Construction Activity Carbon
- ◆ Embodied Carbon
